

## Our Complete Roller Garage Door Fitting Service

With some garage door installers, you can't be sure what you're going to get. However, at Norfolk Roller Doors, you know just what to expect. We've been supplying and installing garage doors for over 20 years, working to our 5-step full service. We will:

### 1 Give You a Quote

You can use our easy quote calculator to get an instant quote, or we can come round and measure up for you. Either way, our team will pay you a visit to make sure we have the correct measurements and confirm your quote – an all-inclusive price for your new fully automated roller door.

### 2 Remove Your Garage Door (if we are installing)

Once you're happy with your quote and have confirmed we can go ahead, we'll visit you again to install your new roller garage door. The first step of the installation process is to remove your existing garage door, which we will safely dispose of later.

### 3 Install Your Roller Garage Door

Our fully qualified engineers will install your new roller door. Afterwards, they will thoroughly test the door to meet standards of compliance and safety, and to ensure there are no problems.

### 4 Retrim Your Doorframe (if we are installing)

Next, we will retrim your garage door frame with uPVC. It's incredibly durable and a good insulator, making it the perfect material for a doorframe. Unlike wood, it won't rot with age.

### 5 Provide Your 2 Year Guarantee

Once your new roller door is installed, you can simply relax and enjoy access to your garage at the touch of a button. And with 2 year guarantees on all of our installations, you can rest assured your roller garage door will be reliable and durable.
